PROFESSIONAL SUMMARY

AI Agent Engineer with hands-on experience building and deploying 10+ production-ready AI agents for enterprise clients across finance, HR, and real estate. Proficient in prompt engineering, RAG pipeline configuration, multi-model LLM integration (OpenAI GPT-4.1/4o, Anthropic Claude Sonnet/Opus, Google Gemini), agentic workflow design, and local LLM deployment using Ollama. Built autonomous agents with real-time web search (SearXNG), self-healing trading logic (Hermes), and Telegram bot deployment. M.Tech in Computer Science with strong Python and SQL skills.

TECHNICAL SKILLS

- **Prompt Engineering:** Agent instruction design, system prompt writing, chain-of-thought prompting, few-shot prompting, guardrails, I/O templates.
- **RAG & Knowledge Base:** Document ingestion, knowledge base structuring, retrieval configuration, embedding-based augmented generation.
- **Agentic Frameworks:** Phronetic AI AgentOS (enterprise), OpenClaw (open-source autonomous agent framework)
- **LLM Models:** OpenAI GPT-4.1, GPT-4o | Anthropic Claude Sonnet, Claude Opus | Google Gemini | Large-context model evaluation.
- **Local LLM Deployment:** Ollama with Qwen2.5-Coder:7B + Atomic Chat — private offline LLM inference and coding assistance.
- **Integrations:** SearXNG (web search), Telegram Bot API, NeonDB (Serverless Postgres), external REST APIs
- **Python & Databases:** API integration, agent tool code, automation scripting | SQL — DQL, Joins, Views, Functions, MySQL.
- **Domains:** Finance (AP/AR, trading), HR automation, real estate, social media, marketing.

WORK EXPERIENCE

AI Agent Engineer (Prompt Engineer) | NighthackTech, Bengaluru

Dec 2025 – Feb 2026

- Designed and deployed 10+ production-ready AI agents on Phronetic AI's enterprise AgentOS platform for clients across finance, HR, and real estate.
- Wrote detailed system prompts and agent instructions defining agent behaviour, tone, response logic, and task workflows — ensuring consistent production outputs.
- Selected and configured LLM models (GPT-4.1, GPT-4o, Claude Sonnet/Opus) based on task complexity, token requirements, and client specifications.
- Developed Python tool code integrating external APIs (finance, HR, email) and performing database operations on NeonDB (Serverless Postgres).
- Structured and utilized domain-specific knowledge bases to enhance response accuracy; iteratively refined prompts, context injection, and guardrails based on client feedback.
- Designed I/O templates and guardrails ensuring safe, structured, production-grade responses; iterated on prompts and knowledge bases based on client feedback.

Key Agents:

- **Finance:** InboxSense Accounts Payable Agent, Automated Accounts Receivable Collections Agent, Financial Intelligence Dashboard Agent
- **HR:** Resume Shortlisting & Feedback Agent, Offer Letter Generator Agent, Auto Response Drafting Agent
- **Real Estate:** Vive property query automation agent for user interactions and property recommendations
- **Other:** Social Media Scheduler Agent, Feature Prioritization Critique Agent, Market Snapshot Agent, Ad Copy Generator Agent.

- Built React Native web interfaces for the Talkument project; transitioned to AI Agent Engineer role after demonstrating strong aptitude in LLM configuration and agent design.

PROJECTS

Local LLM Deployment — Ollama + Qwen2.5-Coder:7B + Atomic Chat

Personal

- Deployed Ollama locally to run Qwen2.5-Coder:7B for fully private, offline AI inference — eliminating dependency on cloud-based LLM APIs for sensitive workloads.
- Integrated Atomic Chat as a local interface for coding assistance, debugging, and prompt experimentation without data leaving the device.
- Demonstrated practical understanding of local LLM infrastructure, model serving, and trade-offs between cloud-hosted and on-device inference.

Technologies: Ollama, Qwen2.5-Coder:7B, Atomic Chat, local LLM inference, open-source model deployment

Autonomous AI Research Agents (x2) — OpenClaw + SearXNG + Gemini

Personal

- Built two autonomous research agents using OpenClaw framework (250K+ GitHub stars) with SearXNG for privacy-first real-time web retrieval without exposing queries to third parties.
- Integrated Google Gemini for large-context reasoning; benchmarked Gemini, Claude, and GPT for token throughput and long-context suitability; deployed via Telegram bot.

Technologies: OpenClaw, SearXNG, Google Gemini, Telegram Bot API, Python, large-context LLM evaluation

Hermes — Self-Healing Autonomous Trading Agent

Personal

- Built an autonomous trading agent with self-healing architecture — detects failures, recovers from errors, and resumes operations without human intervention.
- Implemented self-correction logic for bad trades and API failures; deployed via Telegram bot for real-time trade notifications and manual override commands.

Technologies: Python, Telegram Bot API, large-context LLMs, self-healing agent architecture, trading API integration

Certificate Validation System Using Blockchain

M.Tech Final Project

- Built a DApp for tamper-proof digital certificate issuance and verification on Ethereum using Solidity smart contracts; stored files on IPFS via Pinata with a Streamlit + Firebase frontend.

Technologies: Python, Solidity, Ethereum, IPFS, Pinata, Firebase, Streamlit

Human Facial Emotion Detection

B.E Final Project

- Built a CNN-based deep learning model classifying 6 facial emotions from images and live video using TensorFlow/Keras and OpenCV for real-time detection.

Technologies: Python, TensorFlow/Keras, OpenCV, CNN, NumPy, Pandas

CERTIFICATIONS

Generative AI Mastermind | Outskill

- Completed an intensive program covering generative AI concepts, LLM application design, prompt engineering, and building AI-powered products — issued by Vaibhav Sisinty, Founder of Outskill.

EDUCATION

M.Tech in Computer Science — CGPA: 7.8 | Vidya Vardhaka College of Engineering, Mysuru *Feb 2023 – May 2025*

B.E in Computer Science — CGPA: 6.63 | ATME College of Engineering, Mysuru

Aug 2017 – Jun 2022
